

## Acupuncturist in Kingston

Acupuncturist in Kingston - Intravenous therapy or likewise called IV therapy is the giving of substances directly into a vein. Intravenous therapy may be used to correct electrolyte imbalances, to deliver medications and for blood transfusions. It can even be utilized as fluid replacement so as to correct, like for instance, dehydration. The intravenous route is the fastest method so as to deliver fluids and medications all through the body. Various medications, in addition to blood transfusions and lethal injections, can only be given intravenously.

Intravenous Vitamin C therapy is another treatment for some medical sicknesses like cancer. Even if there is still controversy surrounding this particular kind of treatment, a lot of centers dedicate particular treatment regimens. Amongst the reputed benefits of Vitamin C therapy comprise: prolonging survival and increasing the quality of life. Vitamin C is helpful in preventing systemic free radical injury and corrects an ascorbate deficiency, which is normally found in cancer patients. Vitamin C inhibits hyaluronidase. This is an enzyme made by cancer cells which is responsible for the breakdown of healthy tissue, resulting in tumor progression and metastasis. Vitamin C also works synergistically conventional with various traditional cancer therapies.

Different names for Vitamin C, comprise: L-ascorbate or L-ascorbic acid. It is an important nutrient for humans and various animals. It is a prime antioxidant and protects the body against stress caused by oxidation. Vitamin C is likewise a co-factor in at least 8 enzymatic reactions including various collagen synthesis reactions that result in the most severe indications of scurvy when they are not working correctly. In animals, these enzyme reactions are very essential in preventing bleeding from wound-healing and capillaries.

### Vitamin C Mega Dosage

There are some organizations and individuals who advocate large doses of Vitamin C, more than ten to one hundred times more than the Recommended Daily Intake or RDI. They take these amounts either orally or intravenous therapy. There have yet to be randomized, large clinical trials on the effects of high doses performed on the general population. Linus Pauling spent a large part of his life supporting the use of mega doses of vitamin C. He believed the established RDA was sufficient to prevent scurvy but not necessarily a high enough dosage for optimal health.

Mega doses of vitamin C have been utilized in the treatment and prevention of different conditions such as cancer, coronary disease and the common cold. Current RDI for vitamin C is 60 mg however, several references quote a minimum of 30 mg and others state we must have a minimum of 100 mg on a daily basis. Individuals taking a mega dose may ingest anywhere from 500mg to 1000 mg a day but the side effect of diarrhoea can be a common problem for people who ingest large amounts.
